

Size Chart Guide: It is always best to measure your coach's windshield. This is meant to be a guide only and includes some of the sizes that our customers have purchased for their coaches. You will note that some of the coaches list two sizes, the size difference is where on the tint line the customer chooses to mount the shade as well as our customers particular application. Always mount the shade below the screen printed edge on the top of the windshield, usually about an inch wide. **Again, this is only a guide.** We have not measured these coaches. Also listed are some of the additional items purchased. Thanks!
